

Antibody Microarrays tailored for you

Next to our sets of fixed-content antibody microarrays we offer the production of fully customised arrays. You can either provide an existing set of antibodies or ask us to source the antibodies for your targets of interest. Binding ability and specificity of the antibodies can be controlled using western blotting as well as complex protein arrays.

- Highly-parallel protein analysis from the same sample
- Low sample consumption
- Only 10µg of antibody needed for more than 1.000 tests
- Batch sizes up to 2.000 arrays possible
- Stringent antibody quality control
- Stringent microarray quality control
- High sensitivity / High reproducibility

In-depth pathway profiling

Development of diagnostics

Toxicology

Biomarker verification

Genomics & Proteomics

Antibody characterisation

Identify sandwich pairs

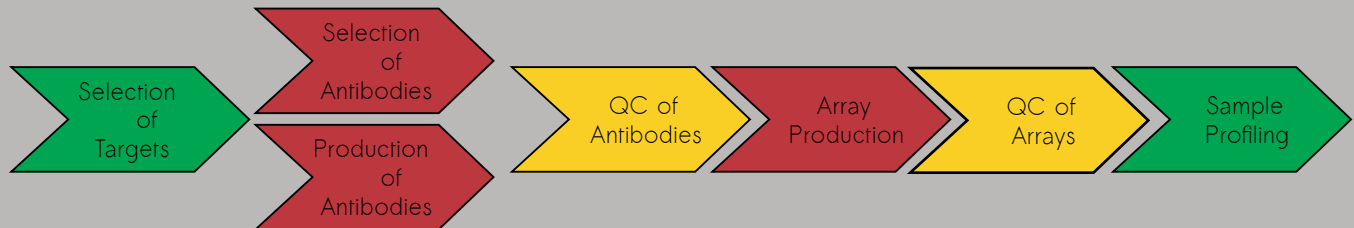

Longitudinal mouse studies
